

BluePrint Data Endpoint Security

Endpoint Security, Desktop Client Software, etc.

Special points of interest:

- BluePrint Data provides Internet Filtering solutions for installation on individual client computers or devices and services running on the local computer. We understand the difficulty and complexities of client software development and work hard to provide you with the tools and utilities to ease the integration process. As with all our solutions we are flexible with the integration architecture and will support your efforts with our API's, SDK's, tools and utilities (all open source and we provide you with our source code).
- By allowing flexibility in architecting our solution to fit your needs we allow you do focus and concentrate on integration and development (as well as sales and marketing). We try to provide an exact fit and can offer hands on implementation assistance to accelerate your time to market. There are versions of software utilizing the BluePrint Data URL Filter technologies on all the major hardware device operating systems including Windows, OS X, iOS, and Android.

OEM Internet Web Content / URL Filtering

BluePrint Data categorizes web sites into content categories in 63 languages. This category information is available to our OEM partners for endpoint devices and desktop computers via our locally installable Content Engine, the BluePrint Data Cloud Engine or with direct licensing of our database.

We are familiar with the challenges and difficulty of client computer software systems. BluePrint Data provides a set of API's, SDK's, and Web based tools to utilize our local Content Engine URL Filtering service. This can be augmented with our cloud installation or with various technologies to implement low-impact, scalable, and cost effective solutions.

Our licenses include all software and database updates as well as standard 24/7 support or optional Premium support.

The locally installable BluePrint Data "Content Engine" with our full URL filter database as well as a set of API's, SDK's, and Web based tools and utilities can assist in the integration of our URL filtering into your services, decreasing the time and complexity of integrating a URL / Web Content filtering service into your product.

At BluePrint Data, our goal is to enable our OEM partners to offer superior content and web filtering products and services at a remarkable value. We offer flexible licensing terms, a dedicated OEM support team, and a personal touch for an exact fit with hands on implementation when needed. We provide support and technical assistance throughout the life of the partnership.

BluePrint Data has the world's largest 100% human reviewed URL Filter Database.

The locally installable configurable "Content Engine" allows for an adjustable cache size from full URL filter database to zero for maximum performance or minimal footprint allowing 100% of the cached URL filter database to reside in memory.

All our products and services come with our standard support which includes full contact information for our service and network technicians as well as an assigned project manager. Please contact us about our Premium Support options.
